

REPUBLICA

What is Republia?

Republia is a decentralized ecosystem, in which users can find easy-to-use services, based on blockchain technologies.

Blockchain technology issues

Hard forks

In 2017 30 hard forks occurred in Bitcoin's blockchain. This process led to bitcoin's price drop and market crash, because investors, who were not ready to face unpleasant consequences, started to exit cryptocurrency market.

Smart contract vulnerabilities

MultiSig wallet smart contract (Parity) contained vulnerabilities, which led to freezing 300 million dollars. This smart contract vulnerability resulted in tremendous investment losses.

Data security

When users provide their personal data to various projects they are exposed to the risk. In 2017 several hacking attacks occurred, which resulted in tremendous investment losses.

High volatility

Most cryptocurrencies, introduced to the market, are very volatile, which depends on news or even political situation. Investors are always at risk of losing their funds, because of market panic.

Our working solutions

Hard forks

In Republia Ecosystem all conflicts are solved through consensus, which allows system to update the protocol automatically. The system can be changed without hard fork implementation, because Republia protocol is divided into three layers.

Smart contract vulnerabilities

Republia VM is implemented using functional programming language Michelson, which allows to verify smart contract before it is launched in the network.

Data security

Three layer security system (Veracity System, CloudX и RepubliaID) ensures security of funds and user data.

High volatility

Republia Bank combined mechanisms of world central banks with blockchain technologies, ensuring RPB price stability in volatile environment.

Key persons

Daniel Shulyaev
Co-founder

www in f

Daniel has an extensive experience in the development of blockchain related technologies, which he uses to implement new projects, support, maintain, analyse existing solutions of Ukrainian and international companies. He contributed to four successfully functioning projects.

Vladyslav Gyrych
Co-founder

www in f

Vladyslav implemented four blockchain projects in Europe and CIS, such as MinexCoin, MinexBank, as well as Ukrainian logistics and technology. He gained a lot of experience in development and investment. Vladyslav also actively participates in various blockchain conferences as a speaker.

Konstantyn Denysenko
CCO

in f

Experience in the area of political consulting, support of investment projects as well as skills gained during participation in the development of ULT project, which united blockchain technology with logistic services.

Hayk Khachatryan
Technical Director

in f

Around 20 years of experience in IT industry, including several years in the position of Lead Engineer and Project Team Lead of Bada OS in Samsung Electronics company, as well as direct participation in the development of the national banking program - Armenian Card.

Advisors

Boris Shulyaev
MinexCoin Founder and CEO

f

Entrepreneur, blockchain enthusiasts and professional economist, owner of one of the largest mining farms in Europe, has a lot of experience in founding and managing large private and public companies. Business angel.

Oleksiy Yakovlev
The head of the Innovative Projects Department at Moore Stephens.

in f

Deep expertise in providing the financial services for corporate and public sectors. Additional activities: Investing in Blockchain startups, Cybersecurity, automation of business processes.

Yunzhu Lin
Xstar.io Co-founder

in

Mr. Yunzhu Lin (Frank) is a New York and Wisconsin Licensed Attorney. Before founding 7 Seas Capital, Mr. Lin was Head of Global Market in Gridseed, the first Litecoin miner manufacturer and co-founded Xstar.

What makes Republia blockchain better?

Self-developing network

Unlimited scalability

Trusted smart contracts

No hard forks

New generation ecosystem

Integrity

Best blockchain services are available on one your gadget.

Easy to use

Communicate with one another, create smart contracts or transfer funds in just one-click.

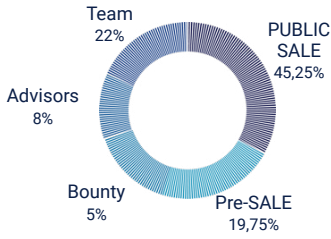

Implementation of your ideas

Deploy your projects on Republia ICO Platform and implement your ideas without substantial capital.

PUBLIC SALE distribution

Coin distribution

Pre-SALE: from 23.08.18 to 23.09.18

Private round: from 23.07.18 to 23.08.18

PUBLIC SALE period soft cap: 5.000.000\$

PUBLIC SALE period hard cap: 50.000.000\$

Fund distribution
