1.0 ABOUT

Republia is a large-scale decentralized ecosystem, that combines elements of countries, that we are familiar with, and mechanisms created on the basis of blockchain technology. The ecosystem is based on an innovative technology, which, in turn, based on functional programming languages.

**LEADING-EDGE ECOSYSTEM
AND TECHNOLOGY**

1.1 MECHANISMS

The key components of decentralized ecosystem provide trustworthy and absolutely transparent relationship between users, presenting a unique concept of smart contracts, a platform for creating their own contracts and modifying the entire ecosystem and a convenient way of communication between community members.

1.2 WE-ECOSYSTEM

Republia Ecosystem

Users

Republia is an analogue of “we-government” model, which aims at direct management of the ecosystem, without involving regulatory authorities. In a platform users are an internal community, members of the ecosystem, which operates in digital space.

“We-ecosystem” is a new level of management, which is based on the main principles of blockchain technology, where users influence the development of the system by themselves, making decisions about changes in existing subsystems independently.

2.0 RPB CRYPTOCURRENCY

Various factors affect cryptocurrency market, which has caused a creation of RPB, a coin with smoothed volatility. The stability of RPB is achieved by Republia Bank mechanism, that affects market fluctuations using "Parking" systems (voluntary holding of personal funds for the purpose of profit), currency intervention and an additional USDR token, the purpose of which is to ensure safety of user funds through in-chain conversion of RPB coin to this token.

All of above mentioned mechanisms are based on a unique solution - artificial intelligence, created on Republia blockchain, which, accordingly, automates the processes of smoothing volatility of RPB coin.

3.0 CONSENSUS

Since Republia follows the ideology “we-ecosystem”, where users can directly participate in the process of modernization of technological solutions, the project is based on an advanced system of consensus, which is one of the main advantages of technology. Due to voting system, which entails decision making through consensus, and then an automated update of the protocol among users, Republia completely solves the problem of hardforks.

4.0 SECURITY

A distinctive feature for Republia project is an approach to security, all important information is stored in CloudX. It is a decentralized data storage, which ensures security of information and funds in the conditions of the entire global ecosystem. Republia also introduces an innovative security system - Veracity System, which is the first Republia product, using artificial intelligence.

Another important guarantee that ensures security of users in Republia ecosystem is a unique digital analogue of Identity Card - RepubliaID. This component minimizes the risk of loss of funds or hacking of user accounts. Moreover, RepubliaID or Veracity System are implemented into all components of global ecosystem, where it is possible to harm other Republia community members. Thus, the participant with RepubliaID becomes a full-fledged member of Republia community and can influence life of the community directly.

5.0 ELIMINATION OF SCAM ICO

In view of emergence of huge number of ICO, which are not connected ideologically or technologically, there is a glut of the industry and the massive emergence of fraudulent schemes. Republia, in turn, provides other participants with an opportunity to create their own campaigns for attracting funds by placing tokens, so called ICO, while protecting the entire blockchain community from the emergence of scam projects. This goal was achieved due to expanding the entire Republia ecosystem by interrelated projects using voting, rather than by adding competitive ICO, as it happens in most widely used platforms.

Users through an internal vote, based on the protocol layer of Republia Blockchain consensus, choose the direction of ecosystem development and those projects they would like to use on the platform. Thus, we will be able to build an integrated system, in which each subsequent addition is a product, for which there is a demand among real users.

REPUBLICA
WALLET

For now you need to fill in 16-digit address for sending funds, but Republia offers uniquely developed integrated solution, that includes both a wallet, and an instant messenger with the function of adding contacts - Republia Wallet, which will be available in the web version. You can send money or message with Republia Wallet easily and quickly, by clicking on a few buttons or using Republia ID as an identifier of user wallet.

8.0 DESCRIPTION OF THE MINIMUM PROTOTYPE

Team Republia Group offers you to become the first to join the ecosystem and test its products. It should be noted that all structural mechanisms at the early stages will be integrated into the system based on feedback from the first users.

Republia Group uses the following products to test the viability of various solutions:

SC Platform

Voting

Bank

Wallet (Messenger)

TEAM

10.0 KEY PERSONS OF THE COMPANY

Daniel Shulyaev
Co-founder

Daniel has an extensive experience in the development of blockchain related technologies, which he uses to implement new projects, support, maintain, analyse existing solutions of Ukrainian and international companies. He contributed to four successfully functioning projects.

Vladyslav Gyrych
Co-founder

Vladyslav implemented four blockchain projects in Europe and CIS, such as MinexCoin, MinexBank, as well as Ukrainian logistics and technology. He gained a lot of experience in development and investment. Vladyslav also actively participates in various blockchain conferences as a speaker.

Konstantyn Denysenko
CCO

Experience in the area of political consulting, support of investment projects as well as skills gained during participation in the development of ULT project, which united blockchain technology with logistic services.

Hayk Khachatryan
Technical Director

Around 20 years of experience in IT industry, including several years in the position of Lead Engineer and Project Team Lead of Bada OS in Samsung Electronics company, as well as direct participation in the development of the national banking program - Armenian Card.
